The G5930 is an unregulated charge-pump voltage

inverter which may be used to generate a negative

supply from positive input. Input voltages ranging from

+1.8V to +5V can be inverted into a -1.8V to -5V output

supply. The devices is ideal for both battery- powered

and board level voltage conversion applications

with a typical operating current of 0.45mA at 3.3V

supply.

The G5930 can deliver 60mA output current with a voltage

drop of 580mV. The parts are over -temperature

protected.

Applications include cell phones, PDAs, and other

portable equipment. The devices is available in a

space-saving 6-pin SOT-23 and TDFN2X2 6-pin

Package.

Applications

Cell Phone

Small LCD Panels

Portable Equipment
