Weaver and company Nuprep Skin Prep Gel 10-30

Ten20 contains the right balance of adhesiveness and conductivity, enabling the electrodes to remain in place while allowing the transmittance of electrical signals.

Electrodes stay in place

Ten20 Conductive Paste will hold the electrodes in place so there is no need to disrupt a test to reattach the electrodes. This reliable paste will conduct the signal that the technologist/technician is relying on for clear results.

Expert technologists and technicians throughout the world rely on the optimal balance of adhesiveness and conductivity of Ten20 paste. Apply the electrode using Ten20, and it will remain in place until it is removed.
