### 产品详情

CASRI Water Detection Capsules can be used to indicate the presence of free water (suspended water) in jet fuels at handling temperature, which is simple, rapid and sensitive. Fuel Test is authorized and approved by the Civil Aviation Administration of China. A 5 mL sample is sucked through the detector head into the syringe. An initial indication occurs at about 10 ppm when the capsule turns from a pale yellow to a pale green color. The color deepens to a dark green-blue, indicating a water content of 30 ppm.
