PMMA环氧树脂胶在破碎时不易导致锋利的碎片,美国、日本等国家和地区已在相关法律法规中作出强制性规定,中小学及幼儿园工程项目用钢化玻璃尽量采用PMMA环氧树脂胶。目前,中国各大城市加快了城市规划建设基本建设步伐,街头标识、灯箱广告牌和电话亭等许多出现,在这其中常见原料中有十分一部分是PMMA环氧树脂胶。北京奥运建筑项目的户外五颜六色建材装饰也许多运用了绿色环保的PMMA环氧树脂胶。

广泛性应用范围:汽车工业(指示灯机械设备、车里车内仪表盘等)。

医疗器械行业(储血容器等)。

工业化生产应用(光碟、灯光照明散射器)。

电子产品的按键(尤其是透明的)。

日用消费品(健康饮品杯、日用品等)。

PMMA surface compressive strength is not high, easy to scratch, impact resistance characteristics of low, molding

liquidity will be less, PMMA modified engineering plastics appear one after another. Such as Vinyl Acetate and Butadiene, Butadiene prepolymer, PMMA and PC blending. Very transparent PMMA materials are important for mobile phone screen protection, the product is divided into two hardening coating, no hardening coating. It is characterized by excellent light transmittance, no sediment, tip discharge protective film and 5-6 H compressive strength after surface hardening. At present, it is highly recommended to use PMMA raw material for hardening treatment, which is called as raw plate in our country.
