产品详情

The thickener used in this grease is a very fine silica powder. Silica is a commonly requested grease thickener but its chemical stability is more limited than the PCTFE oil. Silica-thickened greases can be prone to attack by chemicals active toward silica, such as alkalis, hydrofluoric acid and fluorinating agents. Compatibility of silica-thickened greases should be confirmed before being used in applications in contact with these chemicals. Please see the SDS for more details.
