产品详情

6XHGAPD184 is a silicon-based elastomer with a high degree of flexibility and hardness. It is used in a wide range of applications, including medical devices, automotive parts, and industrial machinery. The material is known for its excellent thermal stability and resistance to aging. It is also used in the production of microfluidic devices and as a sealant in various industrial applications.

Application: This material is used in a wide range of applications, including medical devices, automotive parts, and industrial machinery. It is also used in the production of microfluidic devices and as a sealant in various industrial applications.

Package: The material is supplied in a 1kg bag. It is also available in smaller quantities, such as 500g and 250g.
