TROGAMID CX 7323

聚酰胺

[Evonik Industries AG](#)

产品说明:

By selecting specific monomers, one can achieve a crystallizable and permanently transparent polyamide: TROGAMID CX. The crystallites are so small that they do not scatter visible light, and the material appears transparent to the human eye—a property known as microcrystallinity. Because of its crystallinity, the microcrystalline structure retains important properties such as stress cracking resistance — without clouding. The degree of crystallinity is so negligible, however, that it has no adverse effect on the shrinkage behavior of molded parts. TROGAMID CX undergoes a similar isotropic shrinkage like amorphous materials. The combination of good UV resistance, high mechanical strength, permanent transparency, high transmission and superior chemical resistance opens a wide range of applications for TROGAMID CX. Typical areas of application are in the automotive industry, machinery and engineering, medical technology, the sports and recreation industry, the glasses production, the cosmetics industry and in water treatment and filter technology. TROGAMID CX7323: Medium-viscous, permanently transparent polyamide for injection molding and extrusion.
