s107 series (traditional) of vanadium catalyst

performance

the s107 series (traditional) catalyst, of which formulation has been modified upon the mass customer feedback, is well balanced and optimized in the attributes of its performance. those proven attributes, e.g. good activity at low temperature, good hardness and the long mean-time-to-screening, have been verified by the applications in various sulfuric acid facilities with different feed gas and different capacity level. now s107 series is highly regarded by our customers.
