产品详情

3M Vibration Damping Tape 436 is a silver, dead soft aluminum foil constraining layer coated with a pressure sensitive viscoelastic polymer on a blue polyethylene easy release liner. This tape absorbs and dissipates vibration and reduces noise. It is useful for a variety of applications in the aerospace, automotive, construction, appliance and MRO fields. Cold Temperature Vibration Damping 3M Vibration Damping Tape is a silver, dead soft aluminum foil backed anti-vibration tape. It is designed to reduce structure-borne noise and fatigue in metal and composite panels and support structures. It can achieve effective damping with as little as 10% surface coverage. This durable tape will resist moisture, weather, UV degradation and flame. It is a long aging tape designed to specifically perform in temperatures as low as -76°F/-60°C. The lined construction provides the ability to die cut this product. 3M Vibration Damping Tape 436 meets the requirements of F.A.R. 25.853(a)
