the main strengths of css am-eas detection systems and label deactivators are:

- 1 – our unique algorithm and software help a lot in improving noise immunity of the products;
- 2 – the effective detection distance of detection systems is much wider;
- 3 – the effective deactivation distance of label deactivator is much higher;
- 4 – since all algorithm, software and hardware are developed by ourselves (we owe 100% intellectual property rights) and all products are manufactured in our own factory, we can simply supply professional technical service or even customized service (for example, to prepare tuning software with ui in any language or to produce antennas according to customized requirements);
- 5 – much lower prices comparing to the products with similar performance from sensormatic, wg and gateway.
