产品详情

The UV Cleavable Biotin-Azide allows the tagging of alkyne modified substrates via copper-catalyzed click chemistry.

Highlights:

Biotin conjugate can be subsequently visualized by streptavidin Western techniques and/or enriched using streptavidin purification methods

Captured target can be released under mild photolysis conditions (365 nm) and results in a significant decrease of background signal due to non-specifically bound proteins

Also available: [13C6-UV-Biotin-azide](#)
