

不锈钢、铝板拉丝磨砂机胶辊的介绍

产品名称	不锈钢、铝板拉丝磨砂机胶辊的介绍
公司名称	衡水铭鸿制辊有限公司
价格	240.00/支
规格参数	品牌:铭鸿 型号:mh931 加工长度: 10000mm
公司地址	河北省衡水市冀州区高新技术产业开发区（南区）规划七路中段北侧（注册地址）
联系电话	0318-8780313 13132439311

产品详情

磨砂机胶辊是指使用在不锈钢板、铝板等板材表面进行机械磨砂设备上的滚筒，目的是使不锈钢板、铝板表面视觉上达到纹理效果或者镜面效果，而用手触摸却不会感觉到的一种加工工艺。

磨砂加工过程中，利用砂带等磨削产品接触钢板、铝板，工作方式范围干磨和湿磨，一般卷板用湿磨的比较多，而裁剪成型的板材用干磨和湿磨的工艺都有，而形成的花纹分为NO.4，也称为雪花砂；拉丝，又称为HL纹、发丝纹。

在磨砂机的辊子分为张力辊、接触辊、导向辊、送料辊、夹送辊等种类，所以胶辊在磨砂机设备上是一个不可或缺的重要部件。

从以上论述可以看出，对于铭鸿胶辊因为工作环境的要求必须具备耐磨、耐压同时转速快，需要动静平衡的因素，并具备抗撕裂和疏导散热的效果

The rubber roller of sanding machine refers to the roller used on the mechanical sanding equipment on the surface of stainless steel plate, aluminum plate and other plates. The purpose is to make the surface of stainless steel plate and aluminum plate achieve texture effect or mirror effect visually, but it will not be felt by hand.

In the process of sanding, abrasive belt and other grinding products are used to contact steel plate and aluminum plate. The working mode ranges from dry grinding to wet grinding. Generally, wet grinding is used for rolling plate, while dry grinding and wet grinding are used for cutting and forming plate, and the formed pattern is divided into No.4, also known as snowflake sand; Wire drawing, also known as HL pattern and hair pattern.

In the grinding machine, the rollers are divided into tension roller, contact roller, guide roller, feeding roller, pinch roller and other types, so the rubber roller is an indispensable and important part in the grinding machine equipment.

It can be seen from the above discussion that Minghong cots must have the factors of wear resistance, pressure

resistance, fast speed, dynamic and static balance, tear resistance and heat dissipation due to the requirements of working environment
