VESTAMID L L-R3-EI

聚酰胺12 [Evonik Industries AG](#) 产品说明：

Permanently antistatic and electrically conductive polyamide 12 compounds
Characterization: high viscosity, heat- and light-stabilized, increased cold impact strength, with processing aid
Application Examples: antistatic and electrically conductive moldings or extrudates for use in areas prone to explosion such as coal mining and other industries, e.g., housings for explosion-protected measurement equipment and switches, ventilation fans for electric motors, chair castors, loud speaker boxes, telephone and radio equipment, profiles for assembly lines, also with electric shock protection
The properties of PA 12 compounds can be modified to suit the requirements of many applications by incorporating various additives such as stabilizers, plasticizers, reinforcements, and fillers. The VESTAMID L compounds of Evonik comprise a range of various products that are customized to the requirements of processors and users. Many of the PA 12 compounds are suitable especially for the injection molding of precision parts; others have been developed specifically for the extrusion process.
