

倍力特BE蓄电池PL12-65 12V65AH消防高压电源现货

产品名称	倍力特BE蓄电池PL12-65 12V65AH消防高压电源现货
公司名称	山东萱创电子科技有限公司
价格	.00/个
规格参数	铅酸蓄电池:直流屏, 不间断电源 12V,2V:阀控式电池
公司地址	山东省济南市天桥区粟山路10号滨河小学东临圣 地龙帛大厦6层080号(注册地址)
联系电话	15810400700 15810400700

Australian PL series product structure powerlyte series battery design saves the electrolyte required by the battery in the electrode plate and separator, and there is no free electrolyte in the battery. At the same time, the ability of specially designed mortar gas and high gas reconstitution rate ensure the tightness of the battery. The anode and cathode plates of the battery are made of plate (lattice) made of tezhu high lead calcium alloy filled with active substances, and made of excellent mesh cotton, which can prevent short circuit between positive and negative plates, and can well absorb and maintain and compress the surface of the electrode plate to prevent active substances from falling off. With excellent acid resistance and aging resistance, the battery releases gas when the internal pressure is too high to restore the internal pressure to normal, which can prevent inhalation of air outside the battery. Battery first. All channels are made of synthetic resin ABS with sufficient strength. After the lead sleeve on the battery cover is welded with the terminal, seal the positive red and negative black with sealing resin. In order to improve the high rate discharge performance and reliability, increase the terminal area and be easy to install
