

## 德国Capricorn南美胎牛血清FBS-12A

产品名称	德国Capricorn南美胎牛血清FBS-12A
公司名称	北京华创恒达科技有限公司
价格	.00/个
规格参数	
公司地址	348879174@qq.com
联系电话	010-64484022 18611641282

### 产品详情

Fetal Bovine Serum (FBS) is the most frequently used growth supplement for cell culture media. High levels of embryonic growth promoting factors improve various cell culture applications.

胎牛血清是细胞培养基中最常用的生长补充剂。高水平的胚胎生长促进因子改善了各种细胞培养应用。

Cat-No:FBS-12A

Volume:500 ml

Storage: -15 ° C

Sterility: Sterile-filtered

Fetal bovine serum (FBS) or fetal calf serum (FCS) is widely used in eukaryotic cell culture, typically as a supplement for growth media. Fetal bovine serum contains nutritional and embryonic growth promoting factors that are essential for a successful cell culture. Further, fetal bovine serum contains various small molecules, such as, e.g., amino acids, lipids, sugars, and hormones.

Fetal bovine serum (FBS) is the blood component obtained after coagulation and removal of cellular components. Its unique and comprehensive mix makes FBS one of the most important supplements for supporting cell growth and proliferation for in vitro cell culture.

Our fetal bovine serum for cell culture supports most cell lines and undergoes strict quality controls. This product is collected in South America.

胎牛血清（FBS）或胎牛血清（FCS）广泛用于真核细胞培养，通常作为生长培养基的补充。胎牛血清含有营养和胚胎生长促进因子，对成功的细胞培养至关重要。此外，胎牛血清包含各种小分子，例如氨基

酸、脂质、糖和激素。

胎牛血清是在凝固和去除细胞成分后获得的血液成分。其独特而全面的混合物使FBS成为体外细胞培养中支持细胞生长和增殖的最重要的补充剂之一。

我们用于细胞培养的胎牛血清支持大多数细胞系，并经过严格的质量控制。本产品收集于南美洲。
