

Energy saving cone ball mill

产品名称	Energy saving cone ball mill
公司名称	Henan Hongxing Mining Machinery Co., Ltd
价格	面议
规格参数	
公司地址	Tanxiang Road, High & New Technology Industries Development Zone
联系电话	8637167776666 15837187031

产品详情

High-efficiency energy saving cone ball mill: Application: Ball mill is the key milling equipment after materials has been crushed. It is widely used in cement, silicate, new construction material, refractory material, ferrous metal and non-ferrous metal as well as ceramics. It is widely applied to grind ores in dry or wet process. Working principle: The ball mill is horizontal cylindrical rotation device, driven by brim gearwheel. There are two chambers and grid. Material goes into the first chamber through the feeding inlet. Inside the first chamber, there are stage liners and ripple liners as well as steel balls. The shell rotates so as to generate electricity, and this force brings ball to a certain height and then balls drop down by gravity, the impact is the grinding force to the material. After the primary grinding, materials go into the second chamber through segregate screen. In the second chamber, there are flat liners and steel ball, after the secondary grinding, material is discharged from the discharging. Then the whole grinding process is finished.
