

# lathe |6150 lathe|6150 manual lathe

产品名称	lathe  6150 lathe 6150 manual lathe
公司名称	山东久诚机床有限公司
价格	.00/个
规格参数	
公司地址	山东省枣庄市滕州市洪绪镇唐庄村龙园大道东侧100米（注册地址）
联系电话	0632-5656925 18063243625

## 产品详情

C6150 series ordinary lathes have a wide range of technological properties and are suitable for single-piece and small batch production workshops in general machinery manufacturing, tool manufacturing departments in various industries, machinery and equipment repair departments and laboratories. , Rough and finish machining of inner and outer cylinders, cones and other forms of revolving surfaces of non-metallic workpieces; capable of turning various common metric, inch, modulus, diameter pitch threads and multi-thread threads; capable of drilling, reaming and oil grooves Machining work such as broaching.

### 1. Main drive system

The spindle structure is a three-support structure; the front and middle (NN3020 and 234420BM1, NN3016) bearings are the main supports, and the rear (6215) bearings are auxiliary supports; the spindle head model is C6.

### 2. Feeding system

This machine tool adopts the "three-axis slip" public gear mechanism, and has a thread type changing mechanism and a multiplying mechanism, which can process common threads without changing the hanging wheel; and the automatic lubrication system of the feed box is added to make it easier to use. convenient.

### 3. Tailstock

Tailstock with unloader pushes very easily.

The advanced structural design and perfect technological measures ensure that the machine tool has high machining accuracy and long-term accuracy retention. (When the machine tool is finished turning the test piece, its roundness error is not more than 0.01mm, the cylindricity error is not more than 0.01mm on the 100mm measurement length, and the surface roughness (Ra) is not more than 3.2mm; the precision of the precision turning thread test piece is 300mm. The pitch error on the length is not more than 0.06mm).
