One Cable Connection (OCC) technology for SINAMICS S210

概述

Motor and converter are simply connected to one another by one cable instead of the usual two or three cables. With this One Cable Technology, energy supply, encoder signals and brake control are brought together in a single cable. This results in the following advantages:

Time-saving by laying only one cable

Smaller installation space and space requirement in cable collars

Only one cable has to be cleaned. This is advantageous, e.g. in the pharmaceutical industry and where higher requirements are placed upon hygiene

Can be ordered to the decimeter

Compact connection system

Rotatable connectors on the motor side

Motor with very low interfering contour for restricted installation space

Bending radius optimized to $2.5 \times$ cable diameter static or $4 \times$ cable diameter dynamic for MOTION-CONNECT 800PLUS
