1,faq:

improper wash or process probably make the hair dry, easy to fall down or tangle. how you care for your lace wigs

q: can texture hold long, can texture be duplicated exactly like pictures that i will send you?

a: our texture patterns are permanent even after many washes, the curly or wavy texture pattern is permanent and returns when the unit is wet and air dried. nobody can ensure duplicating a texture can 100% exactly like your picture. but we can ensure we are greatly at curly, wavy texture matching!

q: can i dye /color the hair?

a: only natural color can be colored. as a general rule it is easier to darken the hair than to lighten the hair.

blonde hair has been bleached more so more caution must be taken. we highly recommend having your hairdresser dye the hair as you will get the results you want, coloring them yourself always may ruin the wig. all other colors were dyed by us, so you can't dye again unless you remove the colors we dyed on, but we colored hair permanent. if you can't get to a salon, always use a good quality hair dye and test a small sample first.

q: can i wash & blow-dry the hair products?

a: you can wash them as you would your own. shampoo and

conditioner. we also recommend using a hair treatment on them every few weeks, because the hair is not attached to your scalp, it is not getting the oils it should be. using a treatment/hair mask will help keep them looking healthier and shiny for longer! you will find that you don't need to wash your hair product too much, about every 3 weeks. the hair can be blow-dried on low setting, but it is not recommended to do it

too often. it is best to let your hair product dry naturally after washing them.

q: how to tell human hair with synthetic hair?

a: human hair has natural protein . it is easy to tell by burning and smell : human hair will be ash , which will go away after pinching. human hair will smell foul . when burning , the human hair will show white smoke.

while synthetic hair will be a sticky ball after burning and will show black smoke. moreover, human hair may have very few gray hair and split end. it is normal and not a quality problem.

2.shipment and dlivery:

we make shipment through ups/dhl/fedex//ems, it will take 2-3 business days to arrive usa/canada,

and 3 business days to arrive europe after shipment go out,u.k/france/netherlands/germany/norway etc. but ems is a little slower. shipping and delivery time frame: for stock wigs - we can make shipment immediately for stock wigs the day after payment is cleared.for heavier density or adding highlights,it will take three more days to process.

for custom orders , the delivery time is as below: it will take 20-22 days to produce full lace wigs rush order: 15 days, cost is \$15 per wig.

we share a strategic cooperation relationship with the the world's largest express company ups,fedex

-we have been one of the biggest professional manufacturer and exporter and is growing into a international oriented company in the field of high quality hair products.

- we accept custom,meet your special requirements!

so if you have any questions,pls feel free to contact us at any time! we will try our best to reply your emails as soon as possible, however, due to high volume of daily incoming emails and time differences, we may not be able to reply your emails immediately. please allow 24 business hours for us to response.

### 3.how to appply lace wigs:

wig application tips using adhesives:

1. clip all hair and baby hair away from the edge of the wig to prevent the hair from getting stuck in the bonding adhesive(s) when applying your full lace wig.

2. carefully trim the lace around the hairline of the full lace wig. cut all the lace off right up to the hairline. for beginners, you may wish to leave a little of the lace (1/2") if you think it will be easier to attach the wig to the glue or tape.
3. braid hair in small cornrows, or tightly wrap your hair head for a flat look.
4. use alcohol 99% on a cotton pad and rub around your entire hairline, to remove any oil that may be on your skin. do not use a cotton ball as it will leave traces of cotton along the hairline.
5. apply scalp protector to protect skin from adhesives. this process is great for people with sensitive skin. the skin protector will also help the adhesive stick to the skin in the event of contact with moisture (ie. humidity, swimming, sweating & work outs).
6. for those with hair, use a flesh tone wig cap to flatten and protect your natural hair. be sure to line it up with your hairline, so that, your own hair is completely covered. the flesh tone wig cap will create a scalp illusion. make. to prevent the wig cap from slipping back, allow the glue and/or tape to overlay onto the stocking cap, or loosely stitch the cap in place.
7. apply a thin coat of the liquid adhesive (glue) around all the perimeter of your hairline using a flat wooden cosmetic stick or a small make-up brush.
8. do not bond your lace wig to wet glue because it will not stick well. soft bond adhesive (ie. ultra hold) should have a " tacky " feel when dried. hard bond adhesives such as endurabond, does not require drying time because it dries immediately after being applied. when applying soft bond adhesive use a hair dryer for about five minutes to aid the drying process.
9. to make sure the wig is aligned properly, bond the wig starting at the center of your front hairline. press your wig down using a fine tooth comb from one side to the other. if you have glue showing beyond the edges of the lace remove the excess glue using a q-tip dabbed in 99%, if the wig is not aligned properly, place the q-tip between the lace and your skin to release the lace from its bond then re-adjust the lace the right way.
10. when you have completed the application process, tie down your hairline with a silk or satin scarf. this will allow the glue to set and dry properly. you may also sit under a dryer during this step to aid in the drying process.
