Precautions for international express delivery:

1. The weight of international express package is divided into actual weight and volume weight, and the larger of the two weights will be charged;

2. Volume recalculation

(1) The calculation method of package volume and weight of four international express DHL, UPS, TNT and FedEx: (length x width x height) (cm)/5000, and the unit of length, width and height is cm;

(2) EMS postal express, calculate the volume weight and weight of the package with one side of length, width and height of 60 cm or more: volume weight (kg)=length * width * height (cm)/8000;

3. If the cargo of the international express package is less than 0.5 kg, it will be charged by 0.5 kg;

4. Goods under 21KG are charged as small goods, and the first and second weights
