

# High strength hydraulic petroleum ceramic proppant

产品名称	High strength hydraulic petroleum ceramic proppant
公司名称	内蒙古伊东石油支撑剂有限公司
价格	面议
规格参数	
公司地址	内蒙古自治区鄂尔多斯市准格尔旗沙圪堵镇陶瓷园区
联系电话	86 477 4928176 8615950155890

## 产品详情

Engineered proppants are made of ceramic, usually derived from bauxite, and offer the advantages of uniform size and shape, as well as higher strength. The ability to narrowly control particle size maximizes porosity, and therefore the volume of natural gas extracted. ”

Carefully selected raw materials of high purity bauxite, milled, mixed powder, pellet and sintered at high temperature, our proppant has the features of high technology, stable quality, high temperature endurable, high pressure resistance, high strength, high conductivity and corrosion resistance. It is the reliable products for fracturing in oil and natural gas exploitation. Our products are mainly exported to USA, Canada, Brazil, Russia and other countries. All specifications of our proppant completely Meet or exceed SY/T5108-2006, SY/T6302-1997and API RP 19C specifications.

Our products ceramic proppant can be divided into:

A. By compressive strength: 52MPa (7500psi), 69MPa (10000psi), 86MPa (12500psi), 103MPa (15000psi); B. By bulk density: low density, medium density, high density;

C. By specifications :16-20 mesh ,16-30 mesh ,20-40 mesh ,30-50 mesh ,30-60 mesh ,40-60 mesh ,40-70 mesh ,70-140 mesh, etc.

we can also develop and produce different proppant according to your requirements.
