On March 28, the Commercial Representative Office of the Republic of Azerbaijan in China sent a letter of thanks, thanking the Shanghai Cooperation Demonstration Zone for its efficient assistance in shipping containers stranded in Qingdao. The Commercial Representative Office of the Republic of Azerbaijan in China expressed its appreciation for the relevant assistance provided by the SCO Demonstration Zone, and looked forward to continuing close cooperation with the Demonstration Zone to jointly contribute to Arab-China cooperation in trade, investment and logistics and transportation.

The SCO Demonstration Zone adheres to the principle of interconnection and open "road". Relying on the unique location and transportation advantages of "sea, land, air and rail", it unblocks the international multimodal logistics channel, gathers and develops the modern logistics industry, carries out international logistics cooperation, and strives to build a regional logistics center. The international train routes starting from the SCO Demonstration Zone have

spread across Eurasia, and the SCO Demonstration Zone will play an increasingly important role as a hub in the field of international logistics. The four-in-one logistics system of sea, land, air and rail, diversified and convenient logistics services, mature logistics industry clusters and non-stop domestic and international logistics cooperation are all the unique advantages of the logistics development of the SCO Demonstration Zone. It is reported that at present, the Shanghai Cooperation Demonstration Zone has normalized 16 international trains to reach the SCO and 49 cities in 20 countries along the "the Belt and Road". From January to March 2022, 200 international trains were launched, up 28% year on year.
