

球压试验装置BP-1 球压测试机

产品名称	球压试验装置BP-1 球压测试机
公司名称	广州市荔湾区泓田橡塑五金机器厂
价格	100.00/普通
规格参数	
公司地址	广州市荔湾区西朗村永安桥头东8号
联系电话	86-02081528201 13600466285

产品详情

球压试验装置：BP-1 Ball Pressure Tester BP-1 产品概述：本装置适用于对所有绝缘材料制成的电器外壳、外部零件进行耐热实验，符合GB2099.1-2008图37、IEC884-1图37、GB4706、IEC335、GB4943、IEC950等标准要求，钢球直径：5mm，施加压力：20N ± 0.2N，支承块为：直径50长100，并有直径1.2的测温孔,不锈钢制作。 Products Information Ball Pressure Tester BP-1 Product details: Model BP-1. The HT Ball Pressure Tester is used for testing parts of non-metallic materials for resistance to heat. It is applicable to electrotechnical equipment, its subassemblies and components, and to solid electrical insulating materials except ceramics. In this test, a conditioned specimen is placed on a preheated support and subjected to a force of 20N applied through a 5mm steel ball. The test stand, specimen and loading device are then kept in an oven at an elevated temperature for an hour. After the hour, the loading device is removed from the sample, the sample is cooled and any indentation is measured. It is important to assure that the test stand has reached a stable elevated temperature as required by the test. Ball Diameter: 5mm ± 0.05mm Ball Pressure: 20N (includes loading device and ball) Test Stand: 100mm high x 50mm diameter, hole diameter: 2mm Material: Stainless steel, Ball: hardened steel Conforms to standard: IEC60695-10-2(2003), IEC 60884-1, IEC60320-1, IEC60335-1, IEC60598-1, IEC60950-1.
