产品详情

With the effectiveness of New Chemical Substance Registration System in China from October 15th of 2003, and its revision from October 15th of 2010, no NEW chemical substance is allowed to be imported, manufactured or used in Mainland China, unless it is registered in China – the system is also known as China ' s REACH. New chemicals refer to these chemicals that are not listed in IECSC i.e. Inventory of Existing Chemical Substance of China. New Chemical Registration means registration of the chemical to MEP (Ministry of Environmental Protection of China) by submitting a set of documents (including property data of the New Chemical Substance, its estimated effects to environment, to human, etc.) to MEP for evaluation and approval. Property data must include these obtained via tests conducted inside China by using Chinese test organism by certified labs. As from October 15th of 2010, companies outside mainland China must use a qualified Chinese Notification Agent to make New Chemical Substance registration to MEP. Randis ChemWise (Shanghai) Co., Ltd. can be your Chinese Notification Agent, providing you professional and effective assistance!
