

Chassis Dynamometer

产品名称	Chassis Dynamometer
公司名称	天津天波科达科技有限公司
价格	.00/普通
规格参数	
公司地址	天津南开华苑产业区鑫茂科技园AB座三层F单元302
联系电话	86-2227403265 15522374289

产品详情

产品介绍mc series motorcycle chassis dynamometer mainly tests the performances and exhaust emissions for motorcycles. the test items include acceleration capability, gradeability, top speed, lowest stabilized speed, coasting capability, fuel consumption, output power and exhaust emissions under running mode.性能参数dynamometer absorbed power (kw) dynamometer driving power (kw) maximum running resistance (n)top speed (km/h) speed test precision (%f.s)maximum rotary speed of revolving drum (r/min)fixed inertia of revolving drum(kg) electric inertia compensation range(kg) inertia simulation range(kg)inertia error(kg)inertia compound simulation response time (ms)maximum axle load (kg) range of torque measurement (n?m) error of torque measurement (%f.s) error of distance measurement (%) error of fuel consumption measurement (%f.s) maximum acceleration/deceleration (m/s²) revolving drum diameter (mm) revolving drum width (mm) front wheel clamping device movable space (mm) wheelbase range(mm) cooling blower outlet area (m²) cooling blower motor power (kw) 其他说明this system, which is designed in accordance with the requirements of the national standard and certification codes, can realize the precise control for the road running resistance while the operation is simple. the most important function of the chassis dynamometer system is the simulation for the system ' s moment of inertia, the running resistance setting, and the reproduction of the road running resistance in the system. 交易说明fob tianjin port
