## 产品详情

### ENGAGE 8407 Polyolefin Elastomer

An ethylene-octene copolymer that offers excellent performance in durable injection molded industrial and consumer goods and compression molded gaskets. This provides high clarity in products requiring visual inspection and allows the use of hot runner molds to enhance production efficiency. In addition, the low density can help control resin and production costs, while reducing the weight of end products. It also provides good impact properties in blends with polypropylene (PP) and polyethylene (PE), especially in applications requiring high melt flow modifiers.
