BOSCH韩国蓄电池12V45AH快充直流电源

A battery is a type of battery that can be reused and charged after discharging HC4538D to restore the active substance for re discharge, also known as a secondary battery. It is widely used in sectors such as automobiles, power plants, and rockets. According to the different acid-base properties of the electrolytes used, they can be divided into acidic batteries and alkaline batteries.

(1) Acid lead-acid battery

An acidic lead-acid battery consists of a set of lead antimony alloy grids filled with sponge shaped metallic lead as the negative electrode, and another set of lead antimony alloy grids filled with lead dioxide as the positive electrode. The two sets of grids are immersed in dilute sulfuric acid with a concentration of 27% to 37% electrolyte
