产品详情

what is an opc server opc servers are hardware drivers that are written to a common standard, opc or "ole for process control" (opcua). for hmi, scada, das, etc. are available from newport, omega, wonderware, iconics, intellution, rockwell automation, and many others. hardware support the omega® opc server supports a wide variety of hardware including omega's iseriestm meters, controllers, and other devices. the server is designed to work directly with these products, setup is simple, typically taking only a few minutes. the opc server can be used to connect to a variety of servers. with a serial server you can connect virtually any serial device or instrument to a computer through an ethernet connection.

trial version available a copy of the opc server can be downloaded from the "related links" section shown at the bottom of this page. server software requires purchase of a license and entry of a unique license activation code. without this code, the free trial version can be used for two hours. these two-hour sessions can be repeated as often as necessary to evaluate the software at no charge.
