产品详情

本机床主要用于光学玻璃、蓝宝石、石英玻璃、晶体材料、导光板、阀片、陶瓷、手机面板、五金材料等高精密零件单面抛光设备。

this machine used to grind the single-surface of these high precision components: optical glass, sapphire, quartz glass, crystals, light panel, valve plate, ceramic, mobile phone panel and hardware material etc..

机床有四个加工岗位,相应配置四套零件加压气缸。研磨盘逆时针旋转,工件环带动被加工零件自转,气缸对被加工零件施予压力,被加工零件与研磨盘作相对磨擦运转而达到抛光效果。

this equipment has 4 working plates, thus also has the corresponding 4 pneumatic cylinders . when the grinding plate rotates anticlockwise, collet chuck driving the workpiece rotates, the pneumatic cylinder exerts pressure on the workpiece.the friction motion between the workpiece and grinding plate can realize the polishing and grinding result.
