it's always difficult but crucial to the supervisors to figure out how much energy is consuming. icp das brings the most powerful the markets. with its high accuracy (1%, pf=1), the pm-2134 product can be applied both on low voltage primary side and/o in real time the reliable and accurate energy consumption readings from the monitored equipments while in operation. the revolutionary wired clip-on ct (various types support input current up to 60a) and standard modbus communication rs-48 10v ~ 300v, supporting a wide range of applications. icp das offers pm-2134 in a full range of single-phase compact power combined with easy-to-integrate communications.

the pm-2134-can power meter provides the can bus interface for users to easily gather the real-time power consumption information in response mode which responses messages at regular intervals automatically. it makes the communication more efficient when the precise information of every step required by the monitors. in addition, the pm-2134-can also owns the arbitration mechanism.

#### can bus features

nxp tja1042 can transceiver follow cia can 2.0b specification support auto-response mode and polling mode support baud rate up to 100kbps. can network 2500 vrms isolation on can port. 4 kv esd protection on can port. can bus provides better capability in noise suppression, error detection and error correction on can bus.

#### pac based solution

the pac family of icp das is a modular network-based pac with the capability of connecting i/o either through its own dual bus modules. applying the pm-2134-can into the pac based system, the user could use the can converter or can module. nowadays the power meter firmware inside. the power meter firmware manages all the pm-2134-can power meters and collects all power data and reports to the utility which is shown as the following picture.
