## Market Introduction

Japan is a highly developed capitalist country. Its resources are scarce and it heavily relies on imports. Developed manufacturing is the main pillar of the national economy. Research, aerospace, manufacturing, and education levels all rank among the top in the world. In addition, the cultural industry, led by the animation and gaming industries, and the developed tourism industry are also important symbols of it. According to a survey, Japan can be regarded as a world model in many aspects such as environmental protection and resource utilization. Its citizens generally have good education, extremely high living standards, and national quality. Japan is a powerhouse in the electronic industry. With the continuous development of artificial intelligence and electronic industry in recent years, Japan's

domestic electronic manufacturing industry has shown a declining trend, from rapid sales in the past to relying on electronic core components and upstream chemical materials to maintain advantages. In the process of returning, the Japanese market has shown new demand, which has brought good opportunities for Chinese manufacturers of complete machine products and supporting products to enter the Japanese market, as well as broad cooperation opportunities. According to Japanese customs statistics, in January 2019, the bilateral import and export volume of goods between Japan and China was 76.4 billion US dollars. Among them, Japan's exports to China amounted to 34.05 billion US dollars, a total increase of 14.2%; The total import volume of 423.5 from China increased by 7.0%. The trade deficit between Japan and China is 8.3 billion US dollars. China is Japan's second largest export destination.贸易逆差83亿美元。中国是日本第二大出口目的地。
