## 产品详情

sj系列二次砂浆搅拌机,具有搅拌砂浆工效高,搅拌砂浆均匀细腻的特点。将一次搅拌再经二次 重复搅拌的砂浆通过出料口由吸引胶管直接输入砂浆泵体内,实现不间断地连续工作,确保砂浆不离析 ,不沉淀,使砂浆泵吸料均匀、出料顺利,消除了采用普通搅拌机易对砂浆泵工作产生堵塞、爆管现象

该搅拌机体积小,重量轻,易于安装和搬运。其适用于各种类型的砂浆泵的配套。

sj series secondary mortar mixer has features of mixing mortar with high efficiency and uniform fine. the two times repeated mixed mortar enters mortar pump directly from sucked hose through the discharge port. it fulfills uninterrupted continuous work to ensure that the mortar is not segregation, no precipitation and make mortar pump intake mortar uniform and pump out smoothly which eliminates the phenomenon of ordinary mixers working with mortar pump blocking, burst pipes.

the sj mortar mixer is small size, light weight, easy of installation and handling. it can work with various types of mortar pump.
