镜头描述with non-contact measuring the measurements in 2d and/or 3d areperformed without the risk of product deformation or damage. withinthe (camera) field of view a very high accuracy can be achieved. themeasuring speed of optical measurements with the demeet is veryhigh.a combination of high quality optics and camera is integrated for a clear image with an excellent contrast and a high resolution.telecentric optics are supplied as a standard to avoid perspectiveimage distortion around the center of the field of view.the demeet is either equipped with nikon or leica-design optics for abrilliant image with high contrast. the lenses generate a displaymagnification from 40x to 400x.

多功能的探针功能when measuring certain features encounters the physical limits of noncontactmeasurement, the demeet machines can be additionallyequipped with a touch probe system.with the demeet combo model both principles are integrated andmeasurements can be performed by the optical and the probingsystem. standard a renishaw tp20 with a 5-way stylus configuration issupplied.applications of multi-sensor measuring are among others in theprecision engineering, medical, plastics and electronics industry.
