产品详情

烤漆房顶篷过滤棉

产品特性:

*

采用热熔法加工而成;递增结构,采用多层逐渐加密技术,即往纯净空气方向的纤维密度逐渐增大,较高过滤效率,可根据尘埃大小,被阻挡在不同密度的层次,更有效的容纳较多尘埃;

* 滤网的出风面增加了一层方格织网加强定型,保证良好的空气质量;

* 滤料经过充分浸胶处理,因此可防止任何纤维脱落、泄露,此种滤料同样能过滤掉所有大于5 μ m的粒子;滤料有全粘性、表面粘性、干性处理可供客户选择;

* 耐湿性强,可达100%相对湿度;

ceiling filter

specialty:

* can create uniform air diffusion and provide perfect laminar air flow throughout paint cabin.

* with heat fusion method, advanced gradual structure (the fiber density increases gradual toward pure air) assuring its high efficiency and collect more dust in different layers.

* there is a net or cloth outside which can not only maintain filter effect and extend the working life.

* the material have been deep impregnated which can prevent the fiber drop off; the filter can also collect all the particles which is larger than 5 μ m.

* relative humidity can be 100%.

application:

widely used for air filtration of the painting plant, spray workshop, car factory, automotive maintenance & repair shop, motorcycle industry, household appliances painting.
