PAN-A Series series

High reliability of DC power supply (CV/CC): the model 28

Summary

PAN-A series is a series of DC power supply regulator mode. To be considered an important factor in the reliability and security of the power plant, the system also conducted a comprehensive consideration, such as the use of sufficient margin rated components and equipment, all kinds of security function.

This series can be widely used in the research and development, quality management to the production field and other fields, has high generality. There are 4 types of output capacity: 175W / 350W / 700W / 1000W. According to the maximum output voltage (16V? 600V), product lineup includes 28 types.

Specialty

Low temperature drift

- fast

Low noise voltage

- a function of all kinds of security
- remote control based on the external voltage
- external resistor based on remote control

Single control parallel operation (in the same model)

Single control series operation (in the same model)

Remote ON / OFF control output.

- voltage - current setting knob with 10 transformation
