## 产品详情

### 详细描述

sm-5010 sm-5011

sm5010/5011频谱分析仪适用于电子产品开发研制的先期测试，catv/matv系统的故障检查，蜂窝电话/传呼系统的测试和电磁兼容性的诊断等。和mz530近场探头组合，可对射频漏场进行检测。

sm5011装有跟踪信号发生器；频谱仪和跟踪信号发生器组合使用可以使它完成其它扫频系统做不到的事情，如扫频仪、示波器等。

sm5010/5011 spectrum analyzer is used for the early test in the development of electrical products, troubleshooting of catv/matv system as well as the test and trouble diagnosis of cellular phone/paging systems. combined with the near field probes of mz530, it can detect the missing fields of radio frequency.sm5011 is equipped with a tracing signal generator, and in the combined use of spectrum analyzer and tracing signal generator, it can complete the work which cannot be done by other frequency sweep system, such as sweep generator, oscilloscope, etc.
