4043 alloy

alloy characteristics

alloy 4043 is one of the oldest and most widely used welding and brazing alloys. almigweld and altigweld 4043 can be classified as a general purpose type filler alloy. the silicon additions result in improved fluidity (wetting action) to make the alloy a preferred choice by welders. the alloy is less sensitive to weld cracking and produces brighter, almost smut free welds. features

welding filler wire spray and flame metallizing wire

typical applications

trade designation: almigweld and altigweld non-heat treatable similar to alsil5 (germany), bs n21 (united kingdom) iso designation: alsil5 principle alloying elements: silicon applicable specifications: ansi/aws a5.10 (er & r), ams 4190
