RE-系列旋转蒸发仪(0.5-3L)

RE-Series Rotary Evaporator

进行提纯蒸馏试验的设备，通过恒温加热，在负压条件下旋转形成薄膜，高效蒸发，然后再冷凝回收溶剂，达到提纯分离的效果。产品可与循环水式多用真空泵、隔膜真空泵、低温循环(真空)泵、循环冷却器、恒温循环器、低温冷却液循环泵等配套组成系统装置。

Rotary evaporator is the equipment used for purification and distillation, through constant temperature heating, forms a thin film under the condition of negative pressure rotary, efficiently evaporating, and then condensing, recycling solvent, to achieve the effect of purification. Products can be constituted system devices with circulating water type multipurpose vacuum pump, diaphragm pump, low temperature circulating (vacuum) pump, circulating cooler, constant temperature circulator, low temperature cooling liquid circulating pump and other equipment.
