

常平表面铁处理

产品名称	常平表面铁处理
公司名称	东莞市大朗景丰五金加工厂
价格	2.90/KG
规格参数	产品:常平表面铁处理 工艺:防锈灰色膜处理 类型:常州 精密冲压件、常州 精密冲压件、常州 精密冲压件
公司地址	广东省 东莞市塘厦镇林村工业区
联系电话	0769-82133022 13509025030

产品详情

常平表面铁处理

来源: 华宇五金磷化处理厂 作者: 盘先生

梯形丝杆扭矩抗防锈耐蚀性磷化膜处理产品详细

A steel surface oxide skin and rust, is a form of iron oxide, it is flaky body thick in the steel surface, mainly generated in the process of high temperature processing. For example, during hot rolling steel in high temperature oxidation, generating a solid iron oxides and iron and steel surface, while thicker films, is a layer of chemical bonding force and metal surface oxidation film layer with high strength. Also the scale in heat treatment and welding for high temperature operation process of steel workpiece. Because the oxide skin and body metal binding capacity of high strength, so to completely remove the difficult, after the general use acid dipping to loose, then rinse off, by mechanical erosion or ultrasonic cleaning method can also.

滚齿机蜗轮蜗杆磷酸磷化处理首选东莞市华宇纯黑色磷化膜处理有限公司交货及时 新产品 竭力为您服务
按图加工，经久耐用 行业领先 规格齐全，品质优良 用料考究 价格公道，价格实惠 价格实惠 值得信赖
质量稳定，新产品 经久耐用 质量保证 行业领先
客户信赖!专业：锥齿轮闸阀伞齿轮闸阀、五金拉伸冲压模具加工、滚珠丝杆
速度、弯头呆扳手黑色磷化加工来电咨询：13509025030

company has a fully automatic phosphating processing workshop. Has four automation phosphating processing
productionline, mainly in zinc phosphate or manganese phosphate, can provide all kinds of high quality product
requirements. Saltfog time is 72 hours. Exterior film uniform, color according to the customers request to make
process route. We welcome a society to all circles personage surface treatment industry to our investigation, technical
exchanges. Only learn from each other to improve yourself. - Shanghai road feng auxiliaries co., LTD The so-called
phosphating is through the chemical reaction and electrochemical reaction in the iron and steel surface phosphating
into contain phosphate coverage of membrane. Simply speaking, Shanghai phosphating processing is the matrix and
special potion produce reaction, form their own transformation product. But chemical reaction is the premise of
steelworkpieces point higher than the phosphating liquid medicine point. From detail speaking, iron and steel parts
and phosphating agent contact in the provision of ph, temperature, acidity, stress, time, solvent situation, through the
complex chemical process and electrochemical treatment, in the workpieces surface formation with a certain thickness 6
kinds of water of crystallization of phosphate salt crystallization and qualitative conversion coating layer. This film can
make the steel surface from the conductor into insulators to prevent steel rust. Chemical reaction contains phosphating
solution hydrolysis and ionization. And oxidation. Linhua fluid and steel ion mass reduction and precipitation.
Electric response because metal surface there are some miniature Yin and Yang pole and stress concentration of local
potential than steel hard, forming a micro electric current. Rusted steel parts and phosphatization liquid contacts occur
emulsion degreasing, rely on the surface active ingredient of effect, reduce the surface stress of the reservoir, and the
same time permeability in the reservoir of acid radical and rust role, will also accelerate the reservoir from. From the
surface of the oily substance was degreasing agent emulsion. In case again gathered into liquid.

华宇纯锰磷化膜加工有限公司专业锰磷化膜加工已有十年历史,公司用料考究 竭力为您服务

实体保证,新技术 新工艺

品质一流,生产的“华宇”品牌系列锌钙磷酸盐磷化处理,以其先进的浅灰色磷化处理工艺服务客户
