产品参数

graded hammer standard (ghs) keyboard with matte finish of black keys

just as on a traditional acoustic piano, the keys of the lower notes have a heavier touch, while the higher ones are more responsive to lighter playing. the keyboard's sensitivity can even be adjusted to match your playing style. this graded hammer technology also enables the instrument to provide authentic touch in a lightweight instrument. the matte finish of the black keys enhances the keyboard's luxurious appearance.

advanced wave memory (awm) dynamic stereo sampling

the awm (advanced wave memory) is a sampling system which creates the realism of an acoustic instrument by using digital technology to record the instrument sound and applying high-quality digital filter technology to the recorded audio samples. the waveform of the sound created by playing the key of an acoustic piano differs depending on the playing strength from pianissimo to fortissimo. the awm dynamic stereo sampling can produce such dynamic nuances by recording samples of various playing strengths. the greater the number of samples used, the higher the expression.
