

# CIGS Production Line

产品名称	CIGS Production Line
公司名称	广东振华科技股份有限公司
价格	.00/个
规格参数	
公司地址	广东省肇庆市肇庆大道西段云桂路振华工业园（321国道过境公路近蓝带啤酒厂）
联系电话	13106805907 13106805907

## 产品详情

[Production line for CIGS thin film solar cells](#)

The production line for CIGS thin film solar cells is mainly applied for the production of large-scale photovoltaic glass template or flexible optoelectronic materials based on the surface of flexible materials or ordinary glass panels to deposit CIGS thin films by the technology of magnetron sputtering plus selenium.

As per the market demands on thin film solar cells, our company has developed a number of models and specifications of the continuous sputtering production line with a variety of continuous coating process for the production of CIGS thin film solar panels. Adopting the technology of DC plus MF magnetron sputtering deposition with automatic control system, the production line is available for continuous mass production, enabling itself to replace similar imported machine lines.

During the past years our company made much technical innovation by introducing the talents, absorbing the world advanced technology for the production of the CIGS thin film solar cells, thus we have a powerful technical team capable of supplying to our customers a complete manufacturing line and related auxiliary equipments for the CIGS thin film solar cells production (Turn-Key Projects).

Now our company is able to undertake not only the project of CIGS thin film solar cells, but also the projects of monocrystalline silicon, polycrystalline silicon and amorphous silicon thin film solar cells.
