

# Feeding robot

产品名称	Feeding robot
公司名称	河北长孚电气设备有限公司
价格	350000.00/套
规格参数	
公司地址	河北省保定市锦绣街677号火炬产业园2号通用厂房1-01
联系电话	0312-5901395 18131250224

## 产品详情

### Product overview:

Aluminum smelting furnace is widely used in the deep processing of aluminum and the way of feeding is usually artificial feeding. Due to the bad working environment and high labor intensity, which result in the high production cost and the low efficiency, there are a lot of hidden trouble. The intelligent robots feeding system, which consist of robot, PLC, sensor, touch screen and so on, is researched by our company. It is simple, safe, reliable, and can completely replace the artificial feeding, thus it can save the cost, reduce the security hidden danger and enhance the enterprise competitiveness.

### Range of application :

It is used in aluminum ingot production line of casting aluminum industry.

### Performance indicators :

The control system of furnace feeding robot completely replaces the artificial feeding, which realizes that the robot automatically grabs the aluminum ingots into the furnace and the automatic advance function of the aluminum ingot package.

1. The fixture effective size: 1050mm
2. Working time: 15-20s
3. Aluminum ingot weight: 25kg  $\pm$  1kg

4. Aluminum ingot height: 1000mm

The parameters above can be modified according to the actual parameters and process requirements of the aluminum ingots.
