螺纹元件/Screw elements

螺纹元件是双螺杆挤出机的重要工作部件,螺纹元件质量的高低直接影响了塑料的质量的好坏以及产量的高低,高品质的螺纹元件可以保证塑料分子混合,剪切,分散,着色,反应等等要求。自洁性能极高,能保证整条生产线塑料产品的高品质,为此我公司汲取生产经验,吸取国外产品长处,结合客户的使用情况,设计了自洁性强,耐磨,防腐,适用于各类塑料材料。

Screw elements are the main working parts for twin screw extruder which determined the quality and output of plastic

products. With high quality, the screw elements assure plastic molecular mixing, cutting, spreading as well as reacting among themselves etc. Extremely high self-cleaning performance assures the high quality of the whole production line, for this, our company combined our experience for years, the merits about foreign countries and the customers use, then take them into action, designed all kinds of suitable processing screw element with reasonable parameters, high self-cleaning performance, wear resistance, corrosion-resistance.
