阻燃、耐高温、环保等级等，保证原包正品

The production of POM in the world is mainly concentrated in the developed countries and regions such as the United States, Western Europe and Japan. DuPont, Celanese, Basf, Mitsubishi Gas Chemistry, Japanese Poly, Toray, Poland ZAT and Taiwan Plastics account for 83% of the total production capacity of POM in the world. In 2008, the world POM production capacity was 105,000 t/a, and the apparent demand was 992,000 t. From 2003 to 2008, global POM production grew at an average annual rate of 3.7%, while apparent consumption grew at a rate of 6.1%. In recent years, the demand for polyformaldehyde in Asia has increased rapidly. In 2006, the total demand for POM in the world reached 800,000 tons, and Asia accounted for 50%. The main reason is that the rapid development of Asian automotive manufacturing industry has driven the increasing demand of POM in the automotive industry. POM is light in weight, simple in processing and shaping, low in production cost, and its material properties are similar to those of metals
