Synthetic Aerosol Sprays

A Super Lube aerosol enables one to place Super Lube where it is needed, when it is needed, often without time-wasting disassembly and re-assembly procedures. At-hand in the work place, the Super Lube aerosol results in better on-going equipment maintenance than the “ maintenance frequency schedule ” , which may or may not be followed conscientiously.

Application of Super Lube with aerosols is labor efficient. A staggering 90% of every dollar spent on industrial maintenance is spent on labor.

Since super Lube will not drip or run, the pin point accuracy with which the aerosol puts lubricant exactly where it is required reduces the tendency to “ over lubricate ” .

The Super Lube aerosol can be described as a tool that is convenient and efficient, and ultimately extremely economical.
