In order to implement the spirit of the Standing Committee of the Provincial Party Committee held on July 11, Chengmai vigorously promotes the treatment of rural domestic sewage and speeds up the construction of environmental protection infrastructure, this year it plans to complete the construction of sewage treatment facilities and pipelines in all 12 townships and four major parks.

A few days ago, the reporter in Chengmai County Jinjiang Town Chang'an Sewage Treatment Plant, next week six villages sewage treatment project construction site, etc. saw that the ground excavation site, a section of pipelines orderly splicing, landfill, sewage pipe network laying and supporting projects are accelerating. Relevant departments are striving to overcome difficulties and speed up construction in strict accordance with time nodes.

It is reported that in order to speed up the rural sewage treatment, Chengmai County has compiled and issued the Implementation Plan for the Construction of Rural Domestic Sewage Treatment Facilities in 2019, which has implemented PPP projects of Datang River and Haizai River, and rural sewage treatment and collection network projects of six administrative villages such as Xiafu Village in Jinjiang Town and Gaoshan Langcun. In 2019, the county plans to complete the construction of sewage treatment facilities and pipeline networks in all 12 townships and four major parks, such as the Old Town Development Zone, to promote the extension of sewage pipeline networks to surrounding rural areas to cover more than 40%. Up to now, 18 poverty-stricken administrative villages have completed the construction of rural sewage treatment facilities, and related work is steadily advancing.

In the process of promoting the treatment of rural domestic sewage, Chengmai has also focused on the disorderly discharge of domestic sewage from rivers and ditches in rural areas, the illegal discharge and disorderly discharge of industrial sewage, the comprehensive treatment of black and odorous water bodies such as stinky puddles, stinky pools and stinky ditches, the implementation of silt dredging, the restoration of water ecology, the acceleration of research and development, and the demonstration and promotion of low levels. Cost, low energy consumption, easy maintenance and high efficiency of rural domestic sewage treatment technology and ecological treatment process, strengthen the supervision and management of the daily operation of sewage plants.

"Sewage treatment is closely related to the ecological environment and living environment. Improving the sewage

treatment rate will help promote the construction of ecological civilization and strengthen rural environmental protection." Ji Zhaomin, Secretary of the Chengmai County Party Committee, said that Chengmai resolutely implemented the spirit of the Standing Committee of the Provincial Party Committee, further improved its political position, adhered to the people-centered development concept, did a good job in rural domestic sewage treatment, and focused on improving the human settlements environment.
