产品详情

四棍轧机的工作辊直径较小，传递轧制力矩，轧延压力由直径较大的支承辊承受。这类设备的主要优点是相对刚度较大，压下量大、轧延力小，可轧制较薄的板材，也包括有可逆和连轧两种。

The working roll diameter of the four bar mill is small , and the rolling torque is transferred. The rolling pressure is borne by the backup roller with larger diameter. The main advantages of this type of equipment are relatively large stiffness , large reduction , low rolling force , thin rolled sheets , and reversible and continuous rolling two.

还有三棍轧机，轧机专业厂家介绍，这种轧机由于本身的优势并不突出，所以使用的比较少。那么，220轧机，四棍轧机具有怎样的特点恩？这种类型的轧机的工作辊直径较小，220轧机厂家，传递轧制力矩，220轧机价格，轧延压力由直径较大的支承辊承受。其的优点在于相对刚度高、压下量大、轧延力小，比较适合轧制较薄的板材。

There are three-high mill , mill professional manufacturers , this kind of mill because of its advantages are not prominent , so the use of less. So , what are the characteristics of the four high rolling mill? The working roll diameter of this type of mill is smaller , the rolling torque is transmitted , and the rolling pressure is borne by the backup roll with larger diameter. Its advantages are high relative stiffness , large reduction and small rolling force , so it is suitable for rolling thin sheets.

轧机的辊系在换辊前可以预安装并调整好，轧机停车后只需较短时间即可换上新辊系。而新辊系经少量

试轧后即能轧出合格产品。因此这种轧机可调性能好，成材率高。

短应力线轧机可制成二辊式、三辊式或四辊式多种形式的轧机。在型钢、线材和板带钢生产中都有应用。

The roll system of rolling mill can be pre installed and adjusted before changing the roll. After the rolling mill , it only needs a short time to replace the new roll system. The new roll system can be rolled out of the qualified product after a small amount of test rolling. Therefore , this kind of rolling mill has good adjustable performance and high yield.

The short stress line mill can be made into two - roll , three - roll , or four - roll type rolling mills. It is applied in the middle part of steel , wire and strip steel.
