

联兴冷却辊应用与性能

产品名称	联兴冷却辊应用与性能
公司名称	河北冀州市联兴制辊有限公司
价格	100.00/支
规格参数	直径: 2000mm 长度: 6000mm 材质:无缝钢管
公司地址	河北省衡水市冀州区高新技术产业开发区(南区) 规划七路中段北侧
联系电话	0318-8780313 13132439856

产品详情

联兴冷却辊主要应用于薄膜、钢铁、塑料橡胶、化工、纺织印染等行业，应用领域比较广泛，工作原理就是通过冷却水在辊身内的循环，所以又称为水冷辊，作用是达到对生产产品降温的作用，减少产品的损耗和增加产品的品质；联兴冷却辊一般采用不同材质制作，包括45#碳钢、合金钢等，根据工作环境和温度要求对材质进行选择，内部结构一般有单层和多层水道设计，视客户要求和实际应用环境，达到辊体受热变形率低，换热率高，使在使用过程中产品迅速降温，冷却效果均匀可持续，加快生产线生产速度，提高生产效率，降低产品残次率，增加企业效益。

Lianxing cooling roller is mainly used in film, steel, plastic rubber, chemical industry, textile printing and dyeing and other industries. The application field of cooling roller is relatively wide. The working principle of cooling roller is the circulation of cooling water in the roller body, so it is also called water-cooling roller. Its function is to cool the production products, reduce the loss of products and increase the quality of products. Generally, Lianxing cooling roller is different Material manufacturing, including 45 × carbon steel, alloy steel, etc., shall be selected according to the working environment and temperature requirements. The internal structure is generally designed with single-layer and multi-layer waterways. According to the customer's requirements and the actual application environment, the roller body has low heat deformation rate and high heat exchange rate, so that the product can be cooled rapidly in the use process, the cooling effect is even and sustainable, the production speed of the production line can be accelerated, and the cooling effect can be improved High production efficiency, reduce product defect rate and increase enterprise benefit.
