DVC200A100驱动器原装正品

The micro-sized FM060-25-EM FlexPro drive with IMPACT architecture is an all-purpose digital servo drive for centralized or distributed control systems with EtherCAT communication. Its compact size makes it perfect for any application where space is a limiting factor. This drive is an alternate version of the FE060-25-EM, featuring convenient connectors instead of direct plug-in, so you can easily integrate it into any system.
