That is to say,we are trying to open a store without source of goods in pinduoduo.The cost of opening a store in pinduoduo is very low.And because it is a social e-commerce,so our traffic acquisition on the platform does not depend on burning money to open a through train,so we can get considerable traffic.The advantage of this model is that we don't need to have our own sources of goods,nor do we need to express them by ourselves,all of which are done by the seller.What we need to do is to coordinate the seller and the buyer to earn the difference.
